---

## SUMMARY

---

Backend tech lead with 9 years of experience in payments and fintech, currently leading a 4-person Payouts Reliability team at Lattice Pay. Owns the disbursement service moving ~\$140M/month across ACH, wire, and RTP rails. Looking to step into a formal Engineering Manager role at a Series B/C startup where the people-management I already do informally becomes the job description.

---

## EXPERIENCE

---

### Tech Lead, Payouts Reliability - Lattice Pay

October 2021 - Present · Remote / Oakland, CA

- Lead a team of 4 backend engineers (3 ICs plus self) owning the disbursement service that moves ~\$140M/month across ACH, wire, and RTP rails.
- Run weekly 1:1s with all 3 ICs on the team since October 2024 after the team's manager was pulled into org-wide initiatives.
- Owned the end-to-end hiring loop for backend ICs - wrote the team's hiring rubric, sat on 31 interview loops in 2024, and hired 2 of the team's 4 current members.
- Mentored two junior engineers through promotion to mid-level in 2024, including writing their promo packets.
- Led a 7-month migration from a monolithic Rails service to three Go services, reducing p99 latency from 1,800ms to 240ms.
- Designed and ran the on-call rotation; cut paging volume from ~22/week to ~6/week over 2023 by writing runbook automation and resolving two recurring root causes.

### Software Engineer II → III - Stripe

June 2018 - September 2021 · Remote / San Francisco, CA

- Worked on the Radar fraud detection platform across three product surfaces.
- Tech lead on a 3-person project to migrate Radar's rule-evaluation engine from Ruby to Scala; shipped on time.
- Built a feature flag system used by ~40 engineers across 3 teams; still in use at departure.
- Rebuilt integration test infrastructure, taking a flaky end-to-end suite from ~30% pass rate to >95%.

### Software Engineer - Pivotal Labs

August 2016 - May 2018 · San Francisco, CA

- Pair-programmed full-time on client engagements across a regional bank, a logistics startup, and a pharma company.
  - Worked exclusively in Ruby and Java.
- 

## SKILLS

---

**Languages:** Go (4 yrs), Ruby (8 yrs), Scala, Python, SQL

**Infrastructure:** PostgreSQL, Redis, Kafka, gRPC, Datadog, Terraform, AWS (EC2, RDS, SQS, Lambda)

**People & process:** Hiring loop design, structured 1:1s, on-call rotation design, blameless postmortems, promo packet writing
